

School Track™

Student Tardy/Activity Tracking

Ensure student safety by accurately and securely tracking student on-campus activities.

Track students quickly and easily

Students can be enrolled in a comprehensive database providing immediate access to critical information. Once a student is enrolled their activity history can be tracked. School Track™ is designed not only to track attendance and tardiness of students but also to track the student's use of school facilities such as the cafeteria, library, weight room, or after school activities. School Track™ is designed to work on a standalone PC in the main office or on multiple workstations or available mobile unit connected to a central database on the campus network. Our solution is flexible and will meet the demanding requirements for school administrators.

Easy Implementation and Customization

School Track™ is designed to be easy to install and support. The pre-configured database and screens mean minimal time and effort are required to get started. The software includes the ability to easily add drop down lists for many of the data entry fields.

School Track™ User Interface

School Track™ provides an easy to use interface for verification of an individual's identity and the ability to track visits or activities with your organization.

Here's what School Track user's are discovering:

- Mischief has been drastically reduced now that the students know we have a hall monitoring Mobile unit
- Expelled or suspended students do not have access to the building adding comfort to parents, staff and students
- Emergency logistics is greatly eased by the emergency contact/alerts tab
- Tardy students get to class faster
- Students are not going to multiple lunch waves anymore
- There is now a simple, accurate process for rewarding students through points tracking
- School dances are safer with the Mobile accountability solution

School Track gives you a better way to track on-campus activities

Whether your school is large or small, keeping track of who's late and why, and where students go after they arrive, is never easy. Combined with the unprecedented number of opportunities for before- and after-school activities, and the security concerns of parents, faculty and administration, it's getting harder than ever to figure out exactly where your students are.

School Track™ Mobile gives you more options

School Track™ Mobile extends the functionality of School Track from your desktop PC to a handheld computer, either in school or at sporting events, after-school activities and field trips.

This gives principals, hall monitors and security officers flexibility to track late arrivals, attendance at activities or school policy violations almost anywhere.

Maintaining security on today's school environment is becoming ever more challenging

That's why it's more important than ever to get School Track™ Student Activity Tracking. School Track software is specially developed for the K-12 environment, letting you track student activities to give you the clearest picture yet of exactly what's going on in your school. You'll improve safety, security and student accountability, and have an easily accessible record for future use.
