MIBP1050

Proximity Readers

ISG's Proximity technology offers your facility an easy and convenient access control solution. Proximity technology, which operates on 125 kHz frequency, is easily integrated into existing legacy proximity systems or ideal for a new installation.

The MIBP1050, MIBP1550, and MIBP2110P-K Proximity Readers are attractive, cost-effective and well suited for interior and exterior applications. These readers also have a sleek and attractive architectural styling.

Proximity Readers by ISG™ offer a visual indicator and audio feedback representing status and activity information which make access control simple for your users to understand.

Proximity Readers by ISG™ operate on a Wiegand interface and are compatible with most industry leading proximity credentials and are also completely ISO compliant.

ISG™ Proximity technology is also compatible with many of the other 125 kHz technologies offered in the market today.

ISG™ incorporates technology from XceedID, a division of Ingersoll Rand.

ISG™ Proximity Readers & Credentials

Proximity Credentials

ISG's Proximity technology offers your facility an easy and convenient access control solution. Proximity technology, which operates on 125 kHz frequency, is easily integrated into existing legacy proximity systems or ideal for a new installation. Proximity Credentials can easily fit into a wallet or may be used as a strapped or clipped ID badge.

Offered in several different form factors, ISG™ has the Proximity Credentials to fit your needs. The clamshell style card is highly durable and more rigid than the typical credit card making this card ideal for hard environments. The ISO style card is similar in size and thickness to a credit card and has the ideal surface for printing custom artwork, images and photographs for identification. The keyfob style credential can easily be attached to any keyring for convenience.

The PVC adhesive patch credential can be adhered to any frequently used surface. Proximity Credentials by ISG™ are compatible with all industry leading proximity readers and are also completely ISO compliant. With the Proximity Credentials by ISG™, there is very little wear and tear on the cards ensuring longer life for your cards. These credentials also have a passive design which requires no batteries or maintenance for the life of the card.

ISG™ incorporates technology from XceedID, a division of Ingersoll Rand.

Credential Description
Clamshell Proximity Card
Clamshell Proximity Card with XceedID Logo
ISO Proximity Card
ISO Proximity Card and Magnetic Stripe Card
ISO Proximity Card Composite
