Automated Enrollment System!

Enrollment systems frequently struggle with the balance of gathering quality customer information while minimizing the burden to the customer. The faster your enrollment process works, the more time your customer has to enjoy your products and services.

SmartReg simplifies the process of collecting customer information while actually increasing the accuracy of the information gathered. The SmartReg System provides you with the ability to automatically populate your enrollment screen by scanning a customer's state or federal issued ID.

Features

- Application Independent
- Transparent Operation
- Hot-Key Output
- Auto Screen Recognition
- Special Messages
- Auto Search
- Plug-In Center

Streamline Enrollment

Reduce your enrollment time dramatically with fewer keystrokes and less time manually entering information. Your enrollment system is populated with just a simple swipe of a driver's license. SmartReg decodes the information stored on magnetic stripes or 2D barcodes, which can then be used to automatically complete any enrollment or registration form.

Increase Accuracy & Security

Reduce duplicate records and misspellings by automating machine-readable data directly into your enrollment application. SmartReg also improves privacy and security by reducing the verbal exchange between customer and operator.

Improve Customer Satisfaction

No longer are your customers burdened with the wait-time of personal information being manually entered into your system. Auto-population of your enrollment system leads to a more positive customer experience and more time to enjoy your products and services.

Product Features

- **Application Independent** – SmartReg software supports almost any enrollment or registration application. It is specifically designed to work with your current systems to add a new layer of functionality and increase your cost effectiveness.

- **Transparent Operation** – SmartReg seamlessly processes any enrollment request generated by a card swipe or scan. The information is automatically populated into enrollment or registration forms. The operator simply opens the specific application or service, scans the card and SmartReg does the rest.

- **Magstripe & PDF 417 Compatibility**

- **Built-In Delimited Log File**

- **Automatic Screen Recognition**

- **Static Text Entry**

- **Conditional Tabs**

- **Character Removal**

- **Hot Key** – SmartReg provides the ability for an operator to swipe a driver's license once and then populate multiple screens by pressing a hot-key, eliminating the need to swipe the same driver's license again.

- **Special Messages** – Special pop-up messages can be scripted to automatically appear based on data from the driver's license. Examples include: Under Age, Happy Birthday, Expired ID…

- **Plug-In Center** – Enables execution of third-party applications in response to events within SmartReg. This includes the ability to send arguments using static text and or dynamic driver's license data.

- **System Time Field**

- **System Date Field**

- **CAPS Control**

- **Output Time Delay**

- **Customizable ID Formats**
